

# Castin' Craft Dyes and TAP Pigments can be combined to produce custom colors when mixing your own designer colors

*Used in clear resins such as Clear-Lite Casting Resin and Easy Cast Casting Epoxy.*

Use the color chart below as a guide to help you mix colors. There are endless color possibilities! For best results, follow these basic guidelines.

- If blending colors, mix colorants together on wax paper to test results before adding to mixed resin.
- Add one drop of colorant or mixed colorants per ounce of mixed resin and blend as described.
- To lighten colors, add white. To darken colors add black. Pearlescent will lighten and add a shimmering pearl effect.
- Adding a complementary color will mute and tone down a color. For example, add green to pink for dusty rose.
- Take notes when record proportions if you want to match and mix with the same results each time.
- Secondary colors such as orange and purple are easily created by following the chart below.
- When asked for a 'touch' of color, use a toothpick and add a little time until your color is achieved.
